

# Wireframe Documentation: Anti-Money Laundering System

Author: Ayush Sengar

## Table of Contents

1. Introduction
2. User Interface Designs

### 1. Introduction

This Wireframe Documentation outlines the visual design and layout for the various pages of our Anti-Money Laundering System application. Acting as a foundational blueprint, it equips the development team with a clear understanding of the application's structure and its functionalities, guiding the development process toward creating an intuitive and efficient user experience.

### 2. User Interface Designs

This section presents the meticulously designed user interface (UI) screens, which are crucial for ensuring user-friendly navigation and interaction with the Anti-Money Laundering System. Each design element and layout choice is made with the end-user in mind, aiming to streamline their experience while enhancing the system's effectiveness in preventing money laundering activities.
